**ACADEMIC PROJECTS****Image Classification Projects****Udacity NanoDegree Program**

- **Project 1:** Used a pre-trained image classifier to identify dog breeds, showcasing proficiency in transfer learning and fine-tuning machine learning models. Link to GitHub
- **Project 2:** Designed and implemented a state-of-the-art custom image classification application using PyTorch, demonstrating expertise in deep learning and neural network design. Link to GitHub

Technologies: Python, PyTorch, Pre-trained Models, Transfer Learning, Neural Networks

**AWS Machine Learning Projects****Udacity NanoDegree Program**

- **Project 1:** Predicted bike-sharing demand using AutoGluon, leveraging automated machine learning to optimize prediction models. Link to Github
- **Project 2:** Developed a handwritten digits classifier with PyTorch, implementing deep learning techniques to achieve high accuracy. Link to Github
- **Project 3:** Created a landmark classification and tagging system for social media, using machine learning to enhance image recognition and metadata tagging. Link to Github
- **Project 4:** Built a complete machine learning workflow for Scones Unlimited on Amazon SageMaker, automating data preprocessing, model training, and deployment. Link to Github

Technologies: AutoGluon, Python, Machine Learning, Deep Learning, AWS SageMaker, Model Optimization

## **SafeShare Web Extension**

## **Mini Project**

Developed a secure browser extension that enables users to share login sessions temporarily without compromising security. Utilizes AES encryption for session protection and a timer API to automatically terminate access after a set period. This solution addresses the risks associated with traditional password sharing by providing encrypted, time-limited session sharing for enhanced security and user convenience.

Technologies: JavaScript, AES Encryption, Timer API, Web Development, Browser Extension APIs
